

DIO Electrics Profile

Why we chose our team name DIO Electrics: “It represents our school, relates to electronics and technology and it makes us think about being all “sparked up!”.

So far our best achievements have been learning from the first heat of how to work as a team, being fast and accurate and inspiring each other. This led to a really great semi final for us, as well as us being able to tighten wingnuts!

We are a girls only team, who are really proud to be representing not only our school but girls everywhere! We want to show that gender doesn't matter when it comes to anything and that building, problem solving and engineering are for everyone.

Alice - “I enjoy engineering tasks because I get to work with my team and design cool structures”

Yeshvi - “Working as a team has improved me as a person”

Ivy - “I enjoyed reflecting back on our mistakes, encouraging others and getting to work”

Lutie - “Electronics and technology intrigue me and they are really fun too”

We loved the opportunity to come and compete against other schools, it's such a unique experience and we want to encourage girls to participate in this. We have enjoyed using all the various equipment, problem solving with new and interesting challenges. The challenges have given us a chance to think in different ways and have been building on from the last competition level. This could was a really great experience using problem solving in real life situations and building us into the engineers of the future!
